

ANTIBIOTIC RESISTANCE

WHAT THE AGRICULTURE

SECTOR CAN DO

Antibiotic resistance happens when bacteria change and become resistant to the antibiotics used to treat the infections they cause.

- Ensure that antibiotics given to animals—including food-producing and companion animals—are **only used to control or treat** infectious diseases and under veterinary supervision
- Vaccinate animals to reduce the need for antibiotics and **develop alternatives** to the use of antibiotics in plants
- Promote and apply **good practices** at all steps of production and processing of foods from animal and plant sources
- Adopt **sustainable systems** with improved hygiene, biosecurity and stress-free handling of animals

Implement **international standards** for the responsible use of antibiotics and guidelines, set out by OIE, FAO and WHO
